

# Speed Queen Quality

Speed Queen Perfect Wash™

# A Different Class of Laundry Equipment

- As the world leader in commercial laundry, we're focused solely on creating the best quality washers and dryers in the industry – Laundry is all we do
- Manufacturing products that perform for a quarter-century in the home begins with a program of vigorous product testing long before the manufacturing process begins

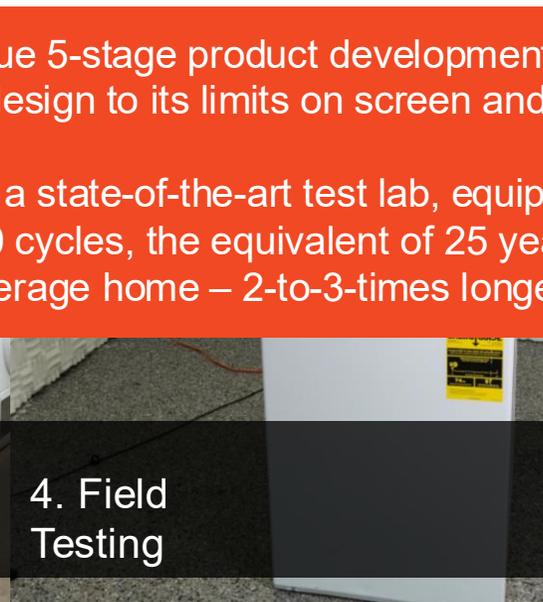

1. Finite Element Analysis

2. Component Testing

3. Life and Load Testing

4. Field Testing

5. Manufacturing/Quality Control

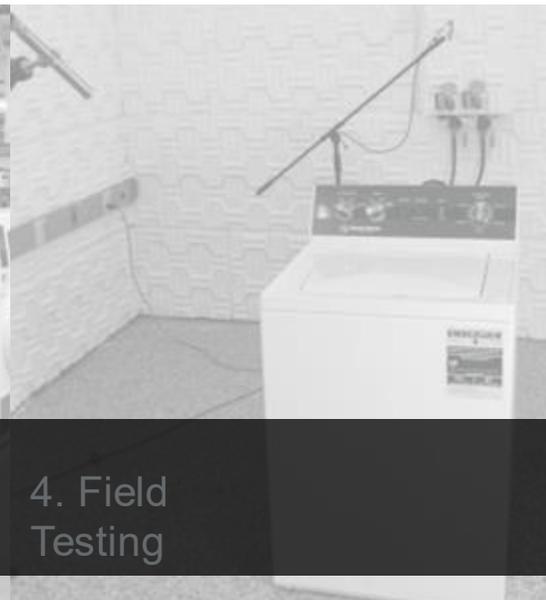

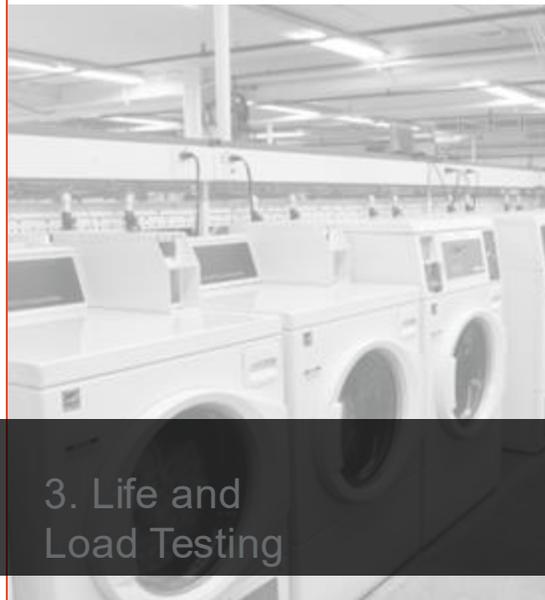

A unique 5-stage product development process that pushes each design to its limits on screen and in the field.

Within a state-of-the-art test lab, equipment is tested to 10,400 cycles, the equivalent of 25 years of performance in the average home – 2-to-3-times longer than other brands.

# A Different Class of Laundry Equipment

## Finite Element Analysis

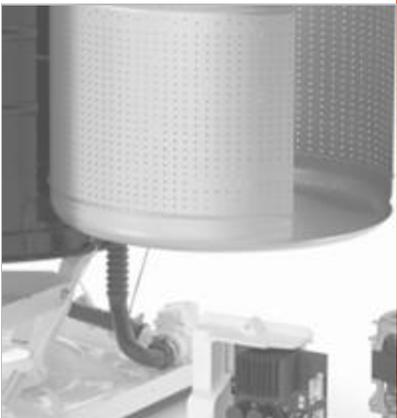

- Engineers test every detail before producing a product's physical form
- Achieve unprecedented quality levels with advanced digital engineering and modeling programs
  - Optimize the design of every component

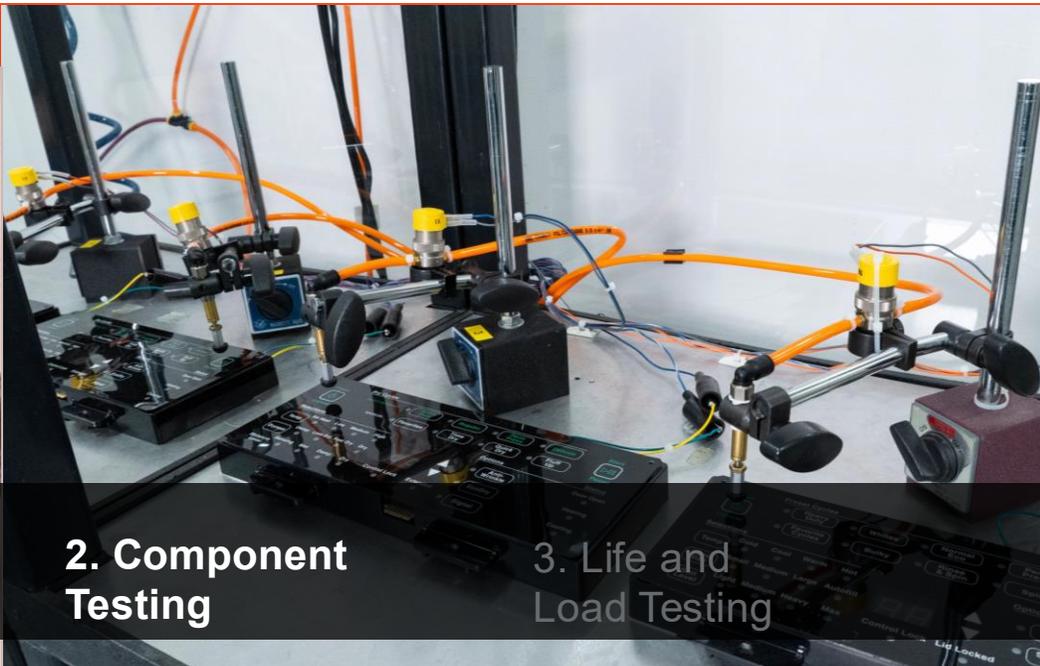

# Designed For the Highest Demands

## Component Testing

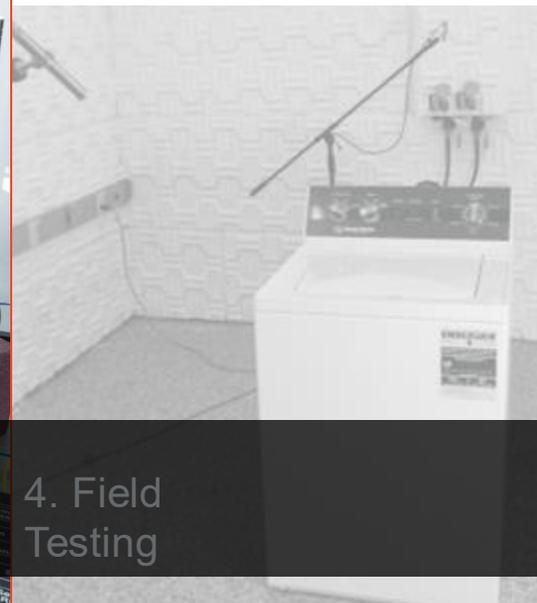

- Products are brought to life in physical form
  - Subjected to component and subassembly testing
  - Requires each part to perform to its expected life cycle
- Certifies unsurpassed durability, even in the harshest environments

1. Finite  
Element Analysis

2. Component  
Testing

4. Field  
Testing

5. Manufacturing/  
Quality Control

3. Life and  
Load Testing

# Designed For the Highest Demands

## Life and Load Testing

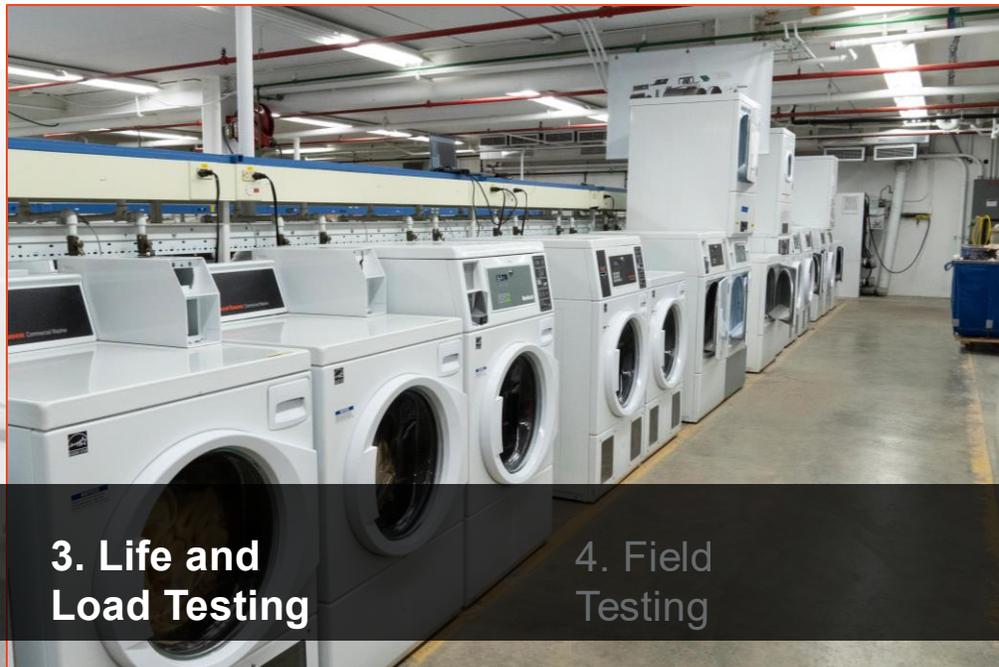

- A test lab with no industry equal; test to extremes
- Exceeding limits and pushing our washers and dryers to the breaking points to ensure they'll last a minimum of 10,400 cycles
- Finding new ways to simulate conditions where damage might occur over time

1. Finite Element Analysis

2. Component Testing

3. Life and Load Testing

5. Manufacturing/Quality Control

4. Field Testing

# Designed For the Highest Demands

## Field Testing

- Once product performance passes in-house testing, equipment must show it will perform to commercial-grade standards in the field
- Before full production, products are tested full-time in the harshest real-world settings

1. Finite Element Analysis

2. Component Testing

3. Life and Load Testing

4. Field Testing

5. Manufacturing/Quality Control

# Designed For the Highest Demands

## World Class Manufacturing and Quality Control

- Leveraging our commercial laundry manufacturing process
- Commercial & residential machines are produced side-by-side
- Each machine is assembled with American pride
  - State-of-the-art technology
  - Ensuring machines are consistently built with precision

1. Finite Element Analysis

2. Component Testing

3. Life and Load Testing

4. Field Testing

5. Manufacturing/Quality Control

# We surpass our competition and our customers' expectations

I only buy speed queen for a reason

Awesome. Only brand I buy cause it runs the best, lasts the longest, and actually cleans clothes. Don't waste your time on any other brand.

 **Speed Queen**
