- Full metal cabinet
- Metal outer tub
- Stainless steel wash tub
- Large 1.0 HP motor
- Heavy-duty drive system
- Solid-base suspension system

Speed Queen Perfect Wash™

# Inspired By Water: The Perfect Wash System

Maintain linen life | Achieve a perfect wash

## Revolutionary

Wash action delivers our best, most gentle wash

## Momentum

Like a wave, water gains momentum, then reverses direction, moving through every fiber of clothing

## Thorough

As the water changes course, clothes get cleaner with a gentle action

## Natural

Motion of water dramatically increases how evenly clothes are washed through the entire cycle

# User Control

Give consumers complete control over the way they do laundry

## **Control**

Modify cycles and select water temperatures to meet needs

## **Ease-of-use**

Choose a water level or let autofill do the work

## **Efficient**

Cancel a cycle without water draining from the machine

## **Flexible**

Pause the cycle at any time and add a garment.

# Water Temperature

Based on homeowner's hot water heater settings

# Auto Fill Feature

Optimize the perfect amount of water for each load

## Speed Queen auto fill is different.

- Ensures enough water is being used for selected cycle
- Adjust water levels by sensing the size of the load, fabric type, absorption levels, and load size
- May continue to add water throughout the cycle
- Does not remove water

## Did you know?

Most field testers trust Speed Queen's Auto Fill feature to deliver a great wash.

## Quiet Wash System

This quiet noise level offers a premium experience in the home.

### Agitates at 43 decibels

That's about half as loud as competitors

- During the wash portion of the cycle, the machine sound is about as loud as a quiet dishwasher
- So quiet you may not even hear it run
- Ideal for placement in any location in the home
